ASWIN SREERAJ

BACKEND & FULL-STACK DEVELOPER | GO

Kerala, India | aswinsreeraj96@gmail.com

Portfolio | LinkedIn | GitHub

PROFILE SUMMARY

Backend Developer specializing in Go and Python, with experience building REST and gRPC APIs, distributed services, and database-backed applications. Strong focus on AI agent execution, tool governance, and reliability checking, along with concurrency control, payment and wallet transaction integrity, clean architecture, and durable workflows. Experienced across PostgreSQL, pgvector, Kafka/Redpanda, Temporal, Redis, and Docker, backed by over three years of financial reconciliation, fraud investigation, and compliance experience from NatWest Group and Amazon. Open to remote work or relocation.

SKILLS

Languages: Go (Primary), TypeScript, JavaScript, SQL, Python, Java, C++

Backend & APIs: Gin, GORM, REST APIs, GraphQL, gRPC, API Design, MCP

AI & ML Systems: Agentic AI Workflows, MCP (Model Context Protocol), LLM Orchestration (Hosted BYOK & Ollama), Semantic Embeddings, kNN Vector Retrieval (pgvector HNSW), ML Evaluation & Calibration (scikit-learn, Cross-Validation, ROC-AUC)

Architecture & Design: Clean Architecture, Microservices, Event-Driven Architecture, Distributed Systems, System Design, Concurrency, Optimistic Locking, Idempotency, State Machines, Caching, Repository Pattern, CQRS, Saga Pattern, Transactional Outbox Pattern

Databases & Caching: PostgreSQL, Redis, SQLite, MongoDB, Dragonfly, pgvector

Messaging & Workflow Orchestration: Apache Kafka, Redpanda, RabbitMQ, Temporal

Security & Authentication: JWT, RBAC, OAuth 2.0, HashiCorp Vault

Cloud & DevOps: AWS, Docker, Kubernetes, Linux, Nginx, CI/CD, GitHub Actions, Jenkins, SonarQube, Podman

Observability & Monitoring: OpenTelemetry, Prometheus, Grafana, Loki, Tempo

Frontend: React, TypeScript, Zustand, TanStack Query

Developer Tools & Fundamentals: Git, GitHub, Neovim, Data Structures & Algorithms

PROJECTS

ARDA — AI Agent Execution & Governance Platform In Progress | GitHub · Reliability Service

A Go-based, multi-tenant platform for executing and governing configurable AI agents, with controlled tool access, durable workflows, reliability assessment, and human oversight.

- **Agent Configuration & Runtime:** Built a shared Go runtime for configurable agents with versioned prompts, Draft-07 output schemas, tool permissions, and execution budgets, binding each execution to an immutable agent version and Vault BYOK credentials.
- **Execution & Tool Governance:** Implemented bounded multi-provider agent execution across 6 LLM adapters, strict structured-output validation, a 10-step Tool Gateway with deterministic guardrails, SHA-256 idempotency locking, SSRF checks, and read/write tool classification.
- **Distributed Execution & Access Control:** Designed synchronous and Temporal-based durable workflows, REST APIs, internal gRPC service communication, tenant-aware JWT access control, and 4-role RBAC permissions.
- **Reliability Service (Completed):** Completed the hexagonal async Python reliability service with BAAI/bge-small-en-v1.5 narrative embeddings, tenant-scoped pgvector HNSW cosine retrieval (iterative_scan = strict_order), multiplicative scoring (Agreement $\times$ Density $\times$ Coverage) across a 6-stage fail-closed gate, and an HMAC-SHA256-verified Redpanda feedback consumer with conflict quarantine and DLQ safety.
- **Pending Components & Readiness:** Core Go control plane and Python reliability services pass automated test suites (272 Go / 219 Python tests); dedicated Human Review service, web Frontend, transactional outbox publishing, and production Kubernetes/observability deployment remain pending.

Tech Stack: Go, Python, PostgreSQL, pgvector, gRPC, Protocol Buffers, Temporal, Redpanda, Vault, MCP, Kubernetes

EVNTX — Event Management & Ticketing Platform Completed | GitHub

A full-stack event management and ticketing platform supporting event discovery, ticket bookings, Razorpay payments, wallet transactions, organizer payouts, engagement analytics, and administrative reporting, with a focus on concurrency control and financial transaction integrity.

- **Concurrency-Safe Booking:** Implemented optimistic concurrency control using version checks, conditional inventory updates, and conflict retries to handle competing ticket reservations.
- **Transactional Wallet & Ledger:** Built a multi-party wallet transaction system using PostgreSQL transactions and row-level locking to coordinate payments, credits, debits, refunds, organizer earnings, and payouts.
- **Payment Verification & Recovery:** Integrated Razorpay order creation and HMAC-SHA256 signature verification, with recovery logic to initiate refunds when payment verification arrives after a booking reservation has expired.
- **Lifecycle Management & Background Jobs:** Modelled event, booking, payment, and payout lifecycles using explicit states, with scheduled jobs for reservation expiration, payout processing, and event completion.
- **Architecture, Authentication & Deployment:** Structured the Go backend using Clean Architecture and implemented JWT-based sessions, role-based access control (RBAC), email OTP authentication, and Google OAuth. Containerized the backend for deployment on AWS EC2.

Tech Stack: Go, Gin, GORM, PostgreSQL, React, TypeScript, Zustand, TanStack Query, Docker, AWS EC2, Razorpay

Tenome — Distributed Search & Web Crawling Platform Learning project | GitHub

A concurrent web crawler and search engine that evolved into separate search, AI-summarization, and notification services, built to learn concurrency and distributed design.

- **Crawling & indexing:** Go crawler fetches pages concurrently; an in-memory inverted index maps terms to documents so queries avoid full scans.
- **Service decoupling:** Kafka-based asynchronous events let the search, AI, and notification services evolve independently.
- **APIs & tooling:** REST and GraphQL APIs, Ollama-powered page summarization, Docker-based development, and GitHub Actions CI.

Tech stack: Go, Gin, GraphQL, PostgreSQL, SQLite, Redis, Dragonfly, Kafka, Docker, GitHub Actions, Ollama

OPEN-SOURCE CONTRIBUTIONS

ORAS — oras-go PRs · GitHub

- Contributed code, documentation, and tests to the Go implementation; reviewed and merged upstream.

PROFESSIONAL EXPERIENCE

Amazon — Senior Product Compliance Associate Bangalore, India | Mar 2022 – Dec 2022

- Analysed product information against regulatory requirements, safety standards, and internal policies to identify compliance risks and determine appropriate actions.
- Collaborated with cross-functional teams to address regulatory issues, investigate potential product safety concerns, and maintain compliance with established procedures.

NatWest Group — Operations Analyst Chennai, India | Jan 2019 – Feb 2022

- Reconciled financial accounts and transaction records, identifying discrepancies and ensuring accuracy, consistency, and compliance with internal policies.
- Investigated chargebacks and potential fraud cases through transaction analysis, documenting findings and preparing audit reports to support risk assessment and fraud prevention.

EDUCATION & TRAINING

Software Engineering Program (Go & Backend) Aug 2025 – Present

Brototype | Kochi, Kerala — project-based training in Go, APIs, databases, Clean Architecture, microservices, system design, and CI/CD.

Overall Best Performer (Jun 2026) — recognised for academic and technical performance and community contribution.

Ontario College Graduate Certificate, Electronics & Embedded Systems Jan 2023 – Aug 2024

Fanshawe College | London, Canada — President's Honour Roll; Dean's Honour Roll (four terms), GPA 4.04 / 4.2.

B.Tech, Electronics & Communication Engineering Jul 2014 – Jun 2018

Guru Gobind Singh Indraprastha University | Delhi, India
